

### TIMETEC PATROL Monitor Patrol Activity, Strengthen Security

A guard patrol system is a system that positions guards on specific patrol routes to serve companies and organizations' assets and environment within the given time intervals, ensuring the security of the surrounding at all times. The most common guard patrol system uses handheld devices or better known as tour wand to perform tour rounds and the reports of the patrol rounds retrieval post-tour only. The latest guard patrol system like TimeTec Patrol incorporates IOT devices, smartphone and cloud technology to offer the industry with a more effective guard patrol system to date.

Using a cloud guard patrol system like TimeTec Patrol, security firms and their clients can monitor the activities of the patrol guards in real time, leaving little room for disobedience or straying from the actual duty. Each guard will be given a tool i.e a smartphone installed with a patrol App and he has to perform his round by tapping on the NFC tags scattered along his assigned route. During a guard's patrol duty, he can receive additional tasks from the control room; send notes and photos to report any incidences he observes in real time. And, the mobile App is equipped with SOS feature to be used during emergencies.

By using TimeTec Patrol, security companies will be updated with the goings-on at all times with live feed, incident reports and detailed view of guards' activities from a reliable centralized system.

There are many benefits of TimeTec Patrol. Keeping all data in the cloud server ensuring its safety because no unauthorized individuals can compromise it. The data is precisely

and securely available as long as the Internet connection is available. If an incident occurs the photos will show what happen without extra story that cannot be corroborated. Scheduling guards is not an easy feat because different sites require different schedules and timing. TimeTec Patrol can cater to that complexity without hassle because the officers can arrange the schedules way in advance and cope with the changes swiftly without compromising the other schedules in the system. The GPS live tracking feature in TimeTec Patrol provides the management and the clients with live view of the guards on sites. All activities and incidents reported by the patrol guards can be viewed in real time in cloud guard patrol system and any remedy to the situations can be supplied at the soonest.

With a cloud guard patrol system, you just pay for what you need, and you can add or reduce according to the requirements without having to deal with huge lost for example dealing with server investment and other hardware tools. Industries suitable for a guard patrol system include TimeTec Patrol include manufacturing industries, schools and educational institutions, public transportation services, finance institution, warehouses security, cleaning and maintenance, retail outlets, medical institutions and residential areas.
